

Supplementary Appendix

This appendix has been provided by the authors to give readers additional information about their work.

Supplement to: Mosher JT, Pemberton TJ, Harter K, et al. Lack of population diversity in commonly used human embryonic stem-cell lines. *N Engl J Med* 2010;362:183-5. DOI: 10.1056/NEJMc0910371.

Supplementary Table. Human embryonic stem-cell lines evaluated.

Reference number	Cell line	Provider*	Country of provider	Geographic region(s) of most similar reference individuals†
1	CCTL-6	Masaryk University	Czech Republic	N Eur/W Eur
2	CCTL-8	Masaryk University	Czech Republic	N Eur/W Eur

Supplementary Table (continued).

Reference number	Cell line	Provider	Country of provider	Geographic region(s) of most similar reference individuals*
40	BG01 (BGN-01)	National Stem Cell Bank / Novocell	USA	N Eur/W Eur
41	BG03 (BGN-03)	National Stem Cell Bank / Novocell	USA	N Eur/W Eur
42	UC06 (HSF6)	National Stem Cell Bank / University of California, San Francisco	USA	S Eur/Middle East
43	WA01 (H1)	National Stem Cell Bank / WiCell	USA	N Eur/W Eur
44	WA07 (H7)	National Stem Cell Bank / WiCell	USA	S Eur/Middle East
45	WA09 (H9)	National Stem Cell Bank / WiCell	USA	S Eur
46	WA13 (H13)	National Stem Cell Bank / WiCell	USA	S Eur/Middle East
47	WA14 (H14)	National Stem Cell Bank / WiCell	USA	S Eur

*The HUES lines were generously provided by Doug Melton, and DNA from the UC06 line was obtained with the assistance of K. Sue O'Shea.

†A geographic region is listed for a stem-cell line if at least one individual from the reference set for that region is represented among the 10 individuals placed closest to the position of that stem-cell line in Figure 1B (Figure 1A for lines ES02 and ES03). Reference populations for which at least one individual appeared among the 10 closest individuals for at least one stem-cell line in Figure 1B include Basque (Western Europe), CEU (Northern and Western Europe), Druze (Middle East), French (Western Europe), Italian (Southern Europe), Orcadian (Northern Europe), Palestinian (Middle East), TSI (Southern Europe), and Tuscan (Southern Europe). Intermediate placement between southern European and Middle Eastern populations, as is apparent in Figure 1B for lines TE03, HUES49, UC06, WA07, WA09, WA13, and WA14, is compatible with Jewish ancestry (NM Kopelman *et al.* 2009 *BMC Genetics* 10:80; AC Need *et al.* 2009 *Genome Biology* 10:R7). For more precise inferred relationships among stem-cell lines and reference individuals, see Figure 1.
